As a result, libraries face new challenges, competitors, demands, and expectations. Libraries are redesigning services and information products to add value to their services and to satisfy the changing information needs of the user community. Traditional libraries are still handling largely printed materials that are expensive and bulky. Information seekers are no longer satisfied with only printed materials. They want to supplement the printed information with more dynamic electronic resources. Demands for digital information are increasing. Digital libraries will start gaining ground in India in the present century. We are heading toward an environment in which digital information may substitute for much photon based information. A library's existence does not depend on the physical form of documents. Its mission is to link the past and the present, and help shape the future by preserving the records of human cuture, as well as integrating emerging information technologies. This mission is unlikely to change in the near future. Digital libraries come in many forms. They attempt to provide instant access to digitized information and consist of a variety of information, including multimedia. Definition A digital library is a library in which collections are stored in digital formats (as opposed to print, microform, or other media) and accessible by computers. The content may be stored locally, or accessed menolow. The first published use of the term may have been in a 1986 report to the Corporation for National Research Initiatives. The term was first popularized by the NSF/DARPA/NASA Digital Libraries Initiative in 1996. Euch (1945) created a vision based on experience ("Digital library.") The Digital Library Federation defines digital libraries as: Organizations that provide the resources including the specialized staff to select structure offer intellectual access to, interpret, distribute, preserve the integrity of, and ensure the persistenc over time of collections of digital works so that they are readily available for use by a defined community or set of communities. (Shiri 2003) The DELOS Digital Library Reference Model defines a digital library as An organization, which might be virtual, that comprehensively collects, manages and preserves for the long term rich digital content, and offers to its user communities specialized functionality Ċ Home Search Settings Recent Saved 点击Saved或PDF图标打开全文
